WORK EXPERIENCE

Mechanical Engineer II

Vicarious Surgical, Inc.

Waltham, MA

January 2022 - Present

- Overhauled the rotary joint sensing design on a novel 9 DoF robotic arm by developing custom multilayer stacks through photochemical machining, increasing joint sensing resolution by 400% and reducing assembly time
- Created multiple design iterations of rotary joint parts while working with vendors to optimize for manufacturability, eventually releasing the parts, their GD&T drawings, and test procedures in Arena QMS
- Designed arm wrist parts for ultrasonic welding and injection molding to decrease assembly time and cost
- Architected a camera thermal test that integrated 8+ thermocouples with Python to correlate internally measured temperatures with external temperatures and understand the thermal gradients across the camera
- Redesigned a camera video pipeline test box to be easily mass produced using sheet metal fabrication, drastically reducing lead times and assembly steps, as well as making it compatible with EMC testing
- Automated tensile testing data collection and analysis using Python (pandas, Matplotlib), streamlining the data analysis workflow and reducing processing time to 30 seconds
- Created a 3D force visualization script in Python using Matplotlib to analyze forces acting on the instrument
- Designed custom arm subassembly test fixtures to isolate features on the arm prone to failure, permitting more iterative design on the arm without requiring a full arm to run testing

Junior Machinist

Northeastern University Machine Shop

Boston, MA

September 2021 - May 2023

- Fabricated parts using CNC (HSMWorks) and manual machines to support over 100+ parts requests per semester
- Designed and manufactured custom tooling holders to reduce setup times
- Utilized multiple work coordinate systems (WCS) to reduce cycle time from 2 minutes to 15 seconds

Reliability Engineering Co-op

MKS Instruments, Inc.

Andover, MA

January 2021 - June 2021

- Performed highly accelerated life testing on mass flow controllers in temperature and vibration chambers, verifying product performance specifications and writing a life testing report
- Streamlined arduous data entry by using Python scripts to aggregate raw data into Excel spreadsheets, decreasing routine data entry time

PROJECTS

Integration Lead & Treasurer

Northeastern University Mars Rover Team (NUROVER)

Boston, MA

September 2019 - Present

- Collaborated with Northeastern students to build a 50kg Mars rover to compete in the University Rover Challenge
- Implemented an imitative haptic controller for the rover arm shaped as a scaled-down model of the arm to increase operator intuition of arm location, resulting in significantly more dextrous control of the arm
- Designed a sheet metal rover frame that increased internal surface area by 34% and decreased weight by 17%

EDUCATION

Northeastern University

Bachelor of Science in Mechanical Engineering · GPA: 3.90

Boston, MA

September 2019 - May 2023

- Honors and Awards: Graduated summa cum laude, Dean's Scholarship, Dean's List (Fall 2019 – Spring 2023)
- Relevant Courses: ME Capstone, CFD, Robot Mechanics and Controls, ME Design, Controls, Materials

SKILLS

Engineering

SolidWorks (CSWA), GD&T, SolidWorks Simulation, MATLAB, ANSYS Fluent, Fusion 360, Excel

Fabrication

3D Printing (FDM & SLA), CNC (Mill & Lathe), Manual (Mill & Lathe), Waterjetting, Laser Cutting

Languages

Python, MATLAB, HTML / CSS, PHP, C
